

DocNet: The Document Management System You Dream Of

Benefits of DocNet®

FLEXIBLE

- Ease of managing numerous file types, such as TIF, Word, Excel, PDF, Zip, JPG, Gif and any other file types as attachment
- Flexible application creation for the unique requirement of each customer
- Multilingual environment

DocNet in Chinese User Interface

EASY DEPLOYMENT

- Seamless integration with Konica Minolta MFPs
- No learning curve (Web browser client familiar to all people)
- No dedicated technical staff for administration

Seamlessly integrated with your Konica Minolta MFP.

HIGH SECURITY

- Control user access by restricting application usage
- Backup the database to any other media out of the DocNet server, e.g. CD-ROM, DVD, MO, floppy disk, portable harddisk, NAS, SAN, RAID etc.
- Choose to connect to DocNet Server using Secure Socket Layer (SSL) by HTTPS protocol for data security

Login system with standard HTTP protocol or secure HTTPS protocol

COST-SAVING

- Save time and space to retrieve
- No client license restriction (unlimited concurrent clients)
- Entry level server license cost for advanced upgradeable system

Content

- One DocNet Server License
- Unlimited DocNet concurrent client users
- One year free live software upgrade from DocNet Master Server via internet connection
- One year free phone-in customer support
- User guide and tutorial via online streaming AV files

Server Requirements

Hardware

Minimum configuration

- Pentium IV 2.8GHz
- 1GB RAM
- 80GB HDD
- 10/100 mbps TCP/IP network
- Internet connection

Operating System

- Sun Solaris Operating Environment 8 or above
- DocNet Linux 9 (free clean installation service can be provided upon request)
- Windows 2000 Professional / Server, XP Professional & 2003 Server

Client Requirements

- Pentium III 500MHz
- 128MB RAM
- TCP/IP network
- Microsoft Internet Explorer 6.0
- Adobe Acrobat Reader 5.0
- Adobe SVG Viewer 3.0
- Macromedia Flash Player 6.0

Optional Features

- Document Level Security
- Archive & Export Module
- Fax Module
- e-FORM (coming soon)
- Resources Calendar (coming soon)
- 3G Mobile Access (coming soon)

DocNet

The essentials of imaging

Information is every organization's most valuable asset. Regardless of how much data an organization stores, it is useless if users cannot readily find, retrieve and apply its "content" as needed. That's why many companies are in need to seek for a content management solution that will help them compete and collaborate more successfully. And here comes our DocNet®!

What is DocNet®?

DocNet is a web-based Document Imaging System which allows users to access the valued information from anywhere at anytime. Tightly integrate with Konica Minolta multi-functional digital products, users can easily configure the Digital MFP as an A4/A3 high speed document scanner, and brings your document into the DocNet system effortlessly.

Announcement module provides a convenient interface for group communication

Admin module

How to use DocNet®

A simple and straight forward procedure of scanning in the document, keying in the index data for filing electronically, and finally, the DocNet delivers the function to allow users for the retrieval of their information seamlessly and efficiently.

Firstly press a One-Touch button on the Konica Minolta Digital MFP control panel to designate which location in the DocNet system the scanned document will be stored, afterwards, by using an industrial standard Internet browser, such as MS Internet Explorer to launch and login to DocNet. Once the access is validated, users can open an Application to file in the scanned document for later-on retrieval.

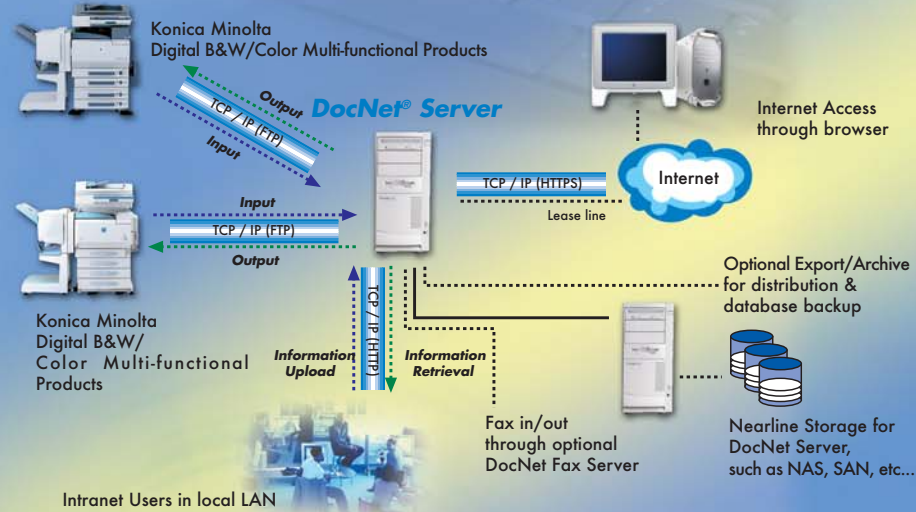

Features of DocNet®

Scan & File

Receive scanned images from digital multi-functional products directly. File any kind of documents in applications with indexed fields defined by end users. TIF, Word, Excel, PDF, Zip, JPG, Gif and other file types could be filed in the DocNet system.

Search, Print, Email and Fax (optional) Functions

The application is very flexible that the user can control the number of fields, data type, mandatory and default value of different filing applications. User can then search, print, email or fax (optional) electronic documents from DocNet at ease. Thus, allowing users to find the information at fingertips.

Document Level Security: (optional)

DocNet comes with a very comprehensive standard document security model in which an administrator can define user groups with different access right to the document in an application, like filing, retrieval, printing, email, modification, deletion, etc... Yet, some users still expect to have a more detailed control on restricting which user group to access any specific document within an application, there comes our Document Level Security(DLS) as a solution.

DLS provides additional controls to the access of filing application. By means of defining which user groups are allowed (or denied) to access document with defined index values, or restricting access of a document to the creator only, this can strengthen the document security to a higher level.

Assign different user groups to access specific document

- Input:**
- Scan from MFP and load into DocNet System with a single click;
 - Files such as doc, xls, pdf, ppt, etc... can be multiple uploaded via ftp & http protocol to the DocNet Server for indexing
 - Route incoming fax to designated filing application depending on fax receive rules (TSI)

- Process:**
- Users perform filing with index fields defined by administrator
 - Users perform document search and then view/print/email/fax on demand
 - Export filed document to removable media for offline use (optional)

- Output:**
- Users can deliver the output by printing email or fax out via DocNet's Fax Server (optional)
 - Images can be retrieved and saved as pdf and png format
 - Original formats can be downloaded and opened by native applications
 - Ad-hoc/ One-touch Fax out through DocNet's Fax Server (optional)

Backup

Backup database to any media at your choice, e.g. CD-ROM, DVD, MO, floppy disk, portable harddisk, NAS, SAN, RAID etc., so that data can be kept safe even when the hardware of the server is down.

Backup system by easy-to-use interface

Additional Functions

Other strong features of DocNet system includes:

- * DocNet provides a viable communication channel for administration in the format of announcement to common users.
- * Administrators can control user access by restricting application usage.
- * Live-upgrade from DocNet Master Server through the Internet to keep the server updated.
